

Satellite Solutions

During the past decade, the emergence of the MPEG-2 video compression standard has enabled satellite operators to lead the digital video revolution. Today, satellite operators continue to provide innovative delivery platforms for contribution and distribution, as well as direct-to-home (DTH) subscriber services. Moreover, satellite is driving a new era of high definition television across the world.

**V-SHINE** head-end solutions are reliable and complete, and our high-quality, bandwidth-efficient MPEG-2 encoder, unmatched statistical multiplexer, Modulators, and data insertion equipment are easy to integrate with other outstanding products. All **V-SHINE** products are based on open standards such as MPEG-2, DVB, SNMP and DVB SimulCrypt, allowing service providers to select from a wide range of conditional access systems and set-top boxes.
