

Terrestrial Solutions

As the world of digital TV evolves, there is a growing need for video on the move. Whether to cover breaking news, capture a live rock concert or sports event, or deliver TV and interactive services to mobile devices, **V-SHINE** has the content creation, management and delivery technologies that are moving digital video forward.

V-SHINE digital broadcast systems support DVB-T standard with solutions that enable terrestrial broadcasters to offer more services in limited terrestrial bandwidth allocations. **V-SHINE**'s DVB-T system consists of a main head-end and multiple regional head-ends. Advanced multiplexers, featuring statistical multiplexing of video within a same stream, accept PSI/SI information and conditional access streams. The head-ends equipments work together to allow operators to schedule guaranteed data-rate transmissions without sacrificing video quality.
